

SMART Inspector

The professional inspection solution for any scaffolding business

**SMART
SCAFFOLDER**

Manage your inspections efficiently!

The Work at Height Regulations 2005 requires records of weekly scaffold inspections by a qualified person. The records are a legal requirement on the scaffold user / hirer. Streamlining the process of inspecting and decommissioning scaffolding structures with a new inspection smart phone app based upon the latest cloud technology makes recording inspections and sharing reports simple.

Save on paperwork

The time and effort it takes to scan, file and send out reports can be dramatically slashed as there's no need for paper forms. No more lost reports as everything is automatically saved in the cloud on secure servers. Retrieving reports couldn't be simpler with our user friendly desktop web console.

Instant reports

Not only can you set up the system so that each inspection is automatically emailed to your client, you also have instant access to the information. You can see which inspections are due, which inspections passed, which failed and crucially which inspections passed and which failed.

The SMART Inspector app key features:

- ✓ Plan inspections in advance to improve efficiency
- ✓ No need to fill in paper forms anymore!
- ✓ Simple to use on site, even if there is no mobile signal
- ✓ Capture photos of any defects
- ✓ Allows you to raise unsafe scaffold reports effortlessly
- ✓ Captures customer signatures on site using your device, no chasing around afterwards
- ✓ Automatically schedules inspection reports to be emailed to customers
- ✓ Easy to use web console with clear reports for managers
- ✓ Automatically uploads a record of each handover and inspection to the cloud
- ✓ Runs on Apple and Android tablets and smart phones
- ✓ Prove, at a glance, that all your past inspections were carried out on time and keep the HSE at bay
